

Easy to build air aid shelter

You will need...

Corrugated steel (1 with a door shape)
Wood (planks)
Nuts and bolts
Hinges
Soil
A ladder
Your self
Spade
Fork

Step 1

Firstly dig a 1 foot wide and 11 feet long hole 10 feet away from the edge of your garden 1/2 a foot down (use a spade). Quite close to an exit of the house if

Step 2

Then dig a hole 1/2 a foot down and 11.f wide and 13.f long and cut the planks to fit them and push them down to the Bottom (tip: jump on it).

Step 3

Next place the corrugated steel in to the side of the hole and put soil around the around to support the structure also put planks around to hold it up
Use nuts and bolts to hold the C.steel to the wooden planks. (use a spanner)

Step 4

After that add roof on top bolt down with nuts and bolts (Use spanner and ladder).

Step 5

Finally all that bolt the hinges to the door and also to the wall. And add a handle. And there you go a shelter. (You can put some soil over the roof if you like any spare grow vegetables).
