

How to make an Anderson Shelter on Sketchup

1.) First get a flat square piece, then use a tool that looks like a lifting tool, and then put the tool over the top of the piece of square and pull it up a little bit high and stop and loose go.

2.) Then get another tool that looks like a semicircle, and link the corner to the other corner and pull it up as high as you like and loose go, then you get the lifting tool again and put it on the side and drag it to the end of the shelter and loose go.

3.) Get a tool that looks like a square and when you have that tool you make a door out of it if you put the tool on the corner and drag it to make its shape like a door and then loose go.
